

S&G® Rotarybolt™ Z03 Electronic Safe Lock

Designed to meet worldwide standards.

Sargent and Greenleaf safe locks have been protecting the assets of banks, businesses and governments for almost 150 years. The S&G® Rotarybolt™ Z03 electronic safe lock meets or exceeds worldwide security standards and uses our patented Rotarybolt design.

Special Features:

- One Master Code, one Supervisor Code, and up to seven User Codes, plus a Time Delay Override Code, if desired.
- Time delay up to 99 minutes.
- Optional silent alarm/duress feature sends an undetected call for help.
- Worldwide certifications:
UL Type 1, VdS 2, CEN B, DNV 3492, A2P B/E.

- Automatically re-locks when you turn the handle.
- Allows unique access codes for individual employees.
- Change access codes any time at the keypad.
- Protects against opening by repeated, random code entry.
- Rotarybolt solenoid lock bolt operation powered by a single 9V battery.

Designed to the
highest European standards
for worldwide applications.

Rotarybolt™ Z03 Electronic Safe Lock

More security features for maximum ease and control.

Flexible modes of operation. The S&G® Rotarybolt™ Z03 ships from the factory in multiple user mode (up to 7 User Codes*, a Master Code, and a Supervisor Code in both configurations). It can be changed to dual control (requires two people to enter separate codes) by simply entering a keypad command.**

Easy to use. Just enter your six-digit code and the Rotarybolt™ Z03 automatically unlocks your safe door. There's no dial to turn and it automatically re-locks when you turn the handle.

Easy to program. You have a choice of one million PIN codes that can be changed easily, any time, via the keypad. No tools, no lock disassembly required.

Track access to the safe. The Rotarybolt™ Z03 features an "audit trail" option, featuring an easy-to-use Windows® 95, Windows® 98, Windows® ME and Windows® 2000-based application that downloads data for viewing in seconds. It identifies the user and event:

openings, code changes, and programming changes.

Programmable Time Delay. To further deter robberies, a programmable time delay of up to 99 minutes is available. A time delay override mode is available when authorized personnel require immediate access.

Silent alarm protection. If employees are forced to open the safe, they can initiate a call for help from the keypad (optional duress module required).

Protects against random dialing. Why take the chance that a thief could randomly enter the right code? Anytime 5 incorrect PIN codes are entered in a row, the Rotarybolt™ Z03 automatically shuts down for 10 minutes.

Fits new and existing safes. Install the Rotarybolt™ Z03 on a new safe, or easily retrofit on an existing safe.

The support of the industry leader. S&G is the world's largest manufacturer of high-security safe combination locks, with the broadest array of locks available. Our electronic locks offer more integrated solutions than all others. We provide excellence in all areas – from our ISO 9001, U.L.®, and other worldwide certifications to our experienced customer service staff. We proudly stand behind all of our products with the best warranty in the industry.

Protect your assets with the Rotarybolt™ Z03.
